This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

**Usage guidelines**

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

**About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

LANE LIBRARY

includes many important works which are now out of print. The range of subjects covers completely all the branches of Medical and Surgical Science, and embraces also Astronomy, Botany, Chemistry, Electricity, Engineering, Geology, Natural Philosophy, Philosophy, Sociology, Voyages and Travels, Zoology, &c.

**The Library also now includes all branches of Engineering Science,** and General Technology, and by following the same policy of putting in *at once* every book of any importance which may be asked for, if not already available, it is hoped that in Engineering Circles and the allied professions the usefulness of the Library may become as well established as it is in the world of Medicine.

**The Quarterly List of New Books and New Editions,** the publication of which was commenced in January, 1901, furnishes a practical guide to the scientific publications of each three months, a short descriptive note being added to all the more important works. *This is issued free to all subscribers.* It is also of service to Book-buyers, as the net price and postage of each book is given, and it will be sent regularly on application post free to any address at home or abroad.

**New Books and New Editions** are added to the Library, and are available to Subscribers immediately on publication. On the appearance of a new edition, the copies of the old edition are immediately transferred to the surplus stock and sold at greatly reduced prices. (Complete List of Surplus books sent post free on application.)
